

A cross-sectional view of a multi-lumen catheter. The device has a scalloped outer sheath (1) containing multiple lumens. The lumens are arranged in a central core (2) and an outer ring (3). The central core (2) contains several large lumens (4) and smaller lumens (5). The outer ring (3) contains lumens (6) and (7). The lumens (6) and (7) are arranged in a ring around the central core. The lumens (4) and (5) are arranged in a central core. The lumens (6) and (7) are arranged in a ring around the central core. The lumens (4) and (5) are arranged in a central core. The lumens (6) and (7) are arranged in a ring around the central core.
